## Abandoned Gas Station in Mays Landing, NJ

#### Site location

Figure: Site: An Abandoned Gas Station

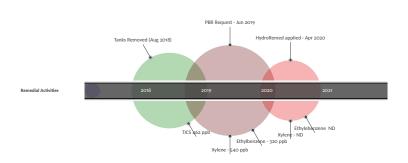

#### Background

- 2 x 8000 gallon UST
  1 x 1000 gallon kerosene UST
  2 x 3000 gallon leaded gasoline
- 1 x 2000 gallon leaded gasoline UST
- The gas station has been abandoned for over ten (10) years.
- At the time of cleanup, the team could arrive at an estimated gas tanks.
- Tanks were removed in 2018.
- Contamination baselines were established in 2019.
- HydroRemed was added to site in April 2020.
- The hydrocarbon contamination levels have been non-detect (ND) for two samples.
- Secondary contamination has been detected and is being addressed.

Current State: The monitoring for levels of secondary contamination is continuing.

# Mays Landing - Remediation Timeline contd.

#### Contaminated Gas Station in Antrim, NH

#### Site location

Figure: Sitemap of monitoring wells

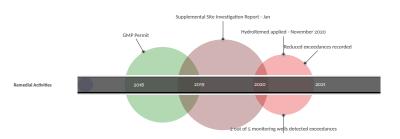

#### Background

- The site is a former retail gasoline and fueling facility, reportedly since 1970s;
- In 1988, several underground storage tanks were removed.
- Previous remedial efforts at the site were conducted by prior consultants and included the use of an in-situ submerged oxygen curtain (ISOC) in 2002 and bio-augmentation via the addition of live bacterial cultures in 2004 to remediate residual petroleum contaminant levels in groundwater at the site.
  - Our group acquired the property in July 2018;
- The project is currently 70 % complete. There are exceedances recorded near two monitoring wells;
- Groundwater from MW-101 contained concentrations of 11 VOCs and 3 PAHs, including concentrations of benzene (32 parts per billion [ppb]) and naphthalene (160 ppb) that exceeded the New Hampshire Ambient Groundwater Quality Standards (AGQS);
- Groundwater from MW-102 contained concentrations of eight VOCs and 3 PAHs, none of which exceeded the AGQS; and
  - \* Details are in the attached report.

Current State: Active. We are reaching out to the DES to discuss our protocol to address the remaining 30% of contamination.

## Antrim NH - Remediation Timeline contd.

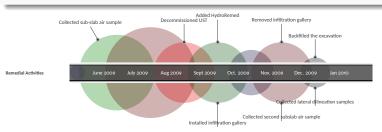

# Past Projects using AgroRemed/HydroRemed

 UST decommissioning and complex soil-only risk-based cleanup, Portland OR

# UST Decommissioning and Complex Soil-only Risk based Cleanup

... "As suggested by the results of the second sub-slab air sample, the microbes were particularly successful in degrading the plume beneath the basement slab." - Mark N, Geohydrologist, Xavier Environmental, Inc. Please click on this link for details.

# VaDEQ DEQ PC# 055160

#### Site location

Figure: Site Location

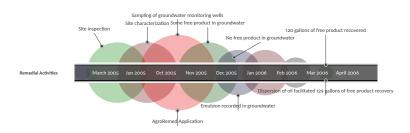

# VaDEQ DEQ PC# 055160 (2)

"... InSitu Bioremediation was requested by the DEQ, as a cost effective method of remediation at this site. A product known as AgroRemed \* was chosen, because of its ability to address all phases of petroleum contamination using a single application." Marvin S, Project Geologist. Link to the report.

# VaDEQ DEQ PC# 055160 (3)

## VaDEQ DEQ PC# 055160 (2) Additional Notes

A notable aspect of the groundwater data shows that free product on Dec 30th reduced to 0. This reduction can be attributed to the addition of AgroRemed on 18th Oct, 2005. Further, the free product in Jan 2006 was in the form of an emulsion. The author's conclusion based on this data is that the emulsion is evidence of the biodispersion enabled by AgroRemed. In retrospect, that is, after observing field data in numerous projects since 2005, we assert that this emulsion phase is critical for effective bioremediation of oil contamination on the field.

"... The application of AgroRemed appears to have reduced the levels of dissolved phase contamination in the groundwater and increased dispersion of the free product, resulting in an increase in the amount of free product in MW-4. Recovery of the free product utilizing aggressive fluid vapor recovery (AFVR) appears to be effective; therefore, its<sup>a</sup> continued use is recommended. " Project Geologist

 $^a$ here "its" refers to the AFVR and not AgroRemed. There was no need to apply AgroRemed after the application in Oct 2005.

## About DeeAar Holdings, LLC

Our group specializes in bioremediation of contaminated properties such as,

- abandoned gas stations;
- and properties contaminated with TCE/PCE.

We strive reduce the time-to-market for contaminated properties to realize value to our clients.

► - Dinkar Ganti, Lead Developer, DeeAar Holdings, LLC.

# Strategic Partnerships

#### Sarva Bio Remed, LLC.

Sarva Bio Remed, LLC is a leader in providing and developing innovative environmental solutions for remediation of contaminants including gasoline, number 2 heating oil, asphalt, PCE/TCE.
